

## ANALYTICAL REPORT

### N-Formylamphetamine (C<sub>10</sub>H<sub>13</sub>NO)

#### N-(1-phenylpropan-2-yl)formamide

Remark – other active cpd. detected: none

Sample ID:	1923-18
Sample description:	liquid - transparent
Sample type:	RM-reference material
Comments:	CAY Lot#0512681,
Date of entry (DD/MM/YYYY):	17/04/2018

Substance identified-structure <sup>1</sup> (base form)	
Systematic name:	N-(1-phenylpropan-2-yl)formamide
Other names:	Formetamide; N-(1-methyl-2-phenylethyl)-formamide; Formetorex;
Formula (per base form)	C <sub>10</sub> H <sub>13</sub> NO
M <sub>w</sub> (g/mol)	163,22
Salt form:	base
StdInChIKey (per base form)	SGSYPSYCGPLSML-UHFFFAOYSA-N
Other active cpd. detected	none
Add.info (purity..)	purity 98,58 %; 1mg/ml ACN solution

## Supporting information

Analytical technique:	applied	remarks
GC-MS (EI ionization)	+	NFL GC-RT (min): 3,68 BP(1): 72; BP(2): 118,BP(3) :44,
FTIR-ATR	+	direct measurement
GC-IR (condensed phase)	+	always as base form

**1. GC-MS** (Agilent): GC-method is RT locked to tetracosane (9.258 min). Injection volume 1 ml and split mode (1:50). Injector temperature: 280 °C. Chromatographic separation: on column HP1-MS (100% dimethylpolysiloxane), length 30 m, internal diameter 0.25 mm, film thickness 0.25 µm. Carrier gas He: flow-rate 1.2 ml/min. GC oven program: 170 °C for 1 min, followed by heating up to 190 °C at rate 8 °C/min, then heating up to 293 °C at a rate of 18 °C/min, hold for 7.1 min, then heating at 50 °C/min up to 325 °C and finally 6.1 min isothermal. MSD source EI = 70 eV. GC-MS transfer line T= 235°C, source and quadropole temperatures 280°C and 180°C, respectively. Scan range m/z scan range: from 50 (30 until 6 min.) to 550 (300 until 6 min) amu.

**2. FTIR-ATR** (Perkin Elmer): scan range 4000-400 cm<sup>-1</sup>; resolution 4cm<sup>-1</sup>

**3. GC- (MS)-IR** condensed phase (GC-MS (Agilent) & IR (Spectra analyses-Danny))

GC-method: Injection volume 1 ml and split mode (1:5). Injector temperature 280 °C. Chromatographic separation as above (1). Split MS : IR = 1 : 9.

MSD source EI = 70 eV. GC-MS transfer line T= 235°C, source and quadropole temperatures 280°C and 180°C, respectively. Scan range m/z scan range: from 50 (30 until 6 min.) to 550 (300) amu.

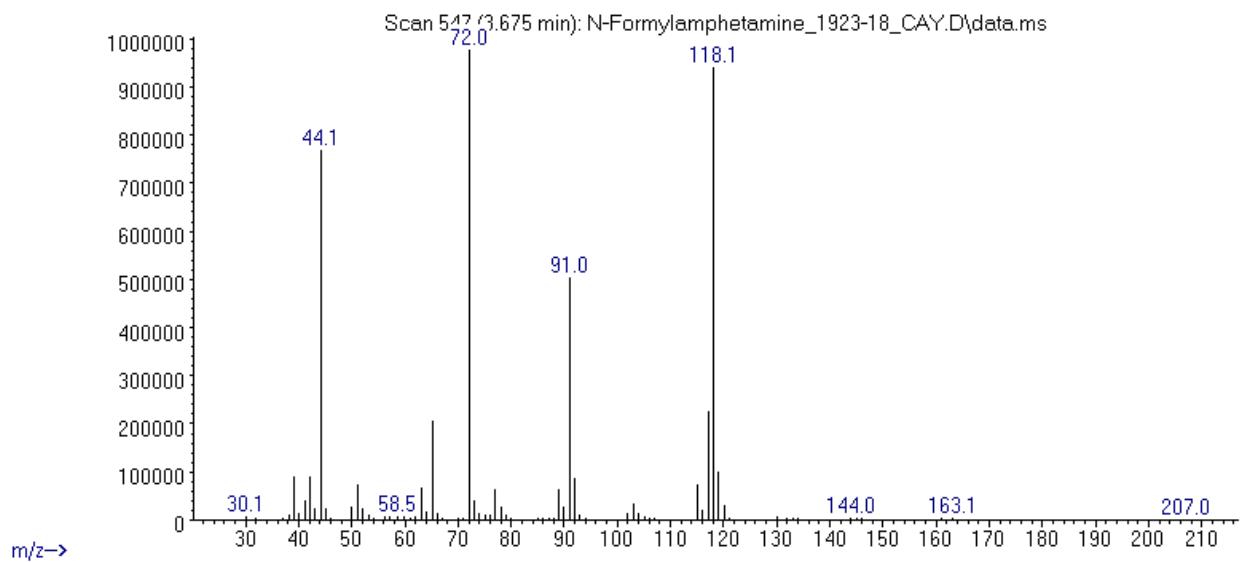

IR (condensed (solid) phase): IR scan range 4000 to 650, resolution 4 cm<sup>-1</sup>.

4. HPLC-TOF for exact monoisotopic mass and empirical formula control - results are not shown in the report.

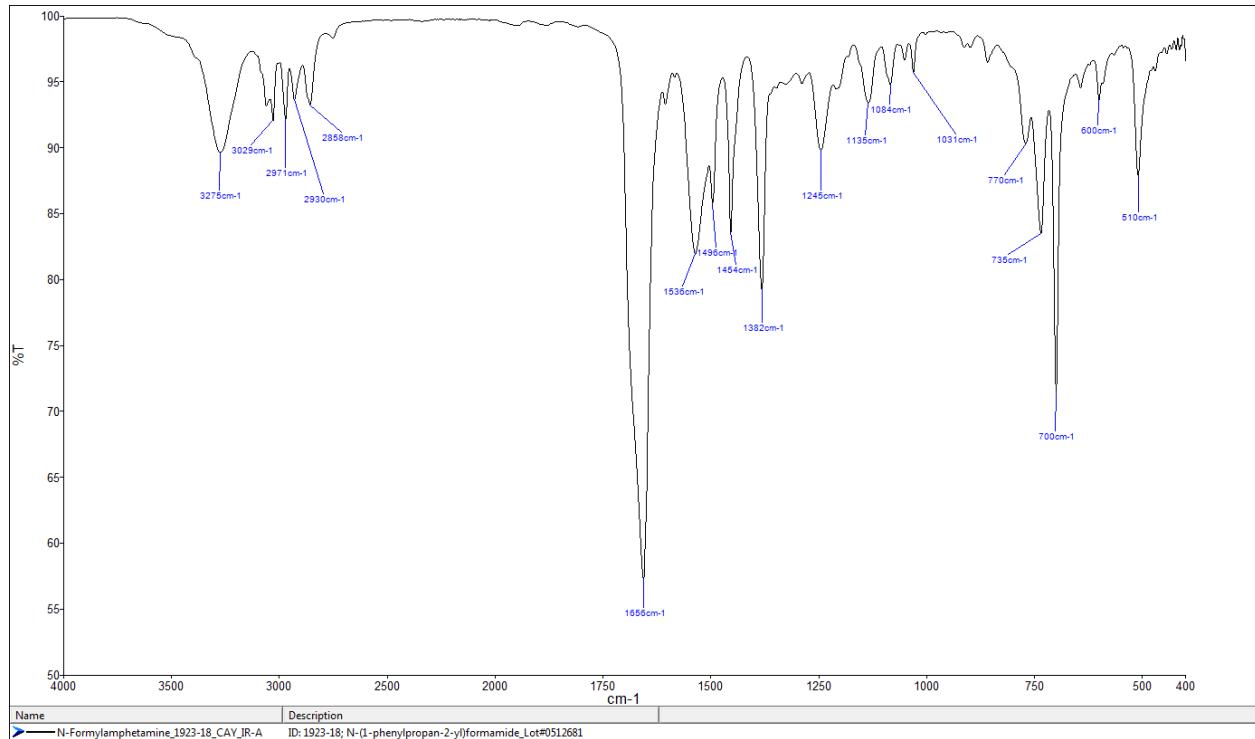

## ANALYTICAL RESULTS

MS (EI)

Abundance

## FTIR-ATR - sample as received

## IR (condensed phase – after chromatographic separation)
